Fast Ethernet Media Converters provide media conversion between 10/100BASE-T (X) and 100BASE-FX Fiber. EtherWAN's media converters are an economical solution for extending existing networks, the lifespan of non-fiber equipment, and the workable transmission distance between devices.

Product description Dualcomm ETAP-2003 is a Network Tap for use with a 10/100/1000Base-T Ethernet link, which is a replacement for the old model DCGS-2005L or DCGS-2005. ETAP-2003 is solidly constructed with a metal case and is probably the smallest in size of all the GbE Network Taps available on the market.

This naming convention gives the data transfer speed, the transmission method and the cable type. So 10BASE-T means that a cable carries 10 megabits of data per second (mbps) over baseband on twisted pair cable. The Ethernet standards progress up to 100 mbps and 1,000 mbps.

A 100BASE-TX transmitter sends three differential voltages, +1 V, 0 V, or -1 V. Unlike earlier Ethernet standards using broadband and coaxial cable, such as 10BASE5 (thicknet) and 10BASE2 (thinnet), 10BASE-T does not specify the exact type of wiring to be used, but instead specifies certain characteristics that a cable must meet. This was done in anticipation of using 10BASE-T in existing twisted-pair wiring systems that did not conform to any specified wiring standard.

Ethernet speed was 10 Mbit/s. Of the Fast Ethernet physical layers, 100BASE-TX is by far the most common. Fast Ethernet was introduced in 1995 as the IEEE 802.3u standard and remained the fastest version of Ethernet for three years before the introduction of Gigabit Ethernet. The acronym GE/FE is sometimes used for devices supporting both standards.

It works with 10Base-T, 100Base-TX, 100Base-T4 and 1000Base-T. Use a good enough cable, if you are confused about categories of cables then use category 5e (enhanced) and you'll be fine even at 1000Base-T.
