For health care workers on the job, the main risk of HIV transmission is from being stuck with an HIV-contaminated needle or other sharp object. However, even this risk is small. Scientists estimate that the risk of HIV infection from being stuck with a needle used on a person with HIV is less than 1%.

HIV Transmission | HIV Basics | HIV/AIDS | CDC

Anaplasmosis is a tickborne disease caused by the bacterium *Anaplasma phagocytophilum*. Tick bites *A. phagocytophilum* is primarily spread to people by the bite of an infected tick.; In the United States, the bacteria is carried by the blacklegged tick (*Ixodes scapularis*) in the Northeast and Midwestern United States and the

western blacklegged tick (*Ixodes pacificus*) along the West Coast.
