The 1RM in the squat was significantly correlated to 10-m sprint time ($r = -0.812$), 20-m sprint time ($r = -0.872$), VJ height ($r = 0.869$), agility T-test time ($r = -0.758$), and club head velocity ($r = 0.805$). The lack of relationship suggests that FMS is not an adequate field test and does not relate to any aspect of athletic performance.

Relationship Between Functional Movement Screen and ...

The development of an agreed-upon set of foundational ethical values for the field of public health is ongoing. In this paper we outline key elements of recent convergence on some basic moral precepts that drive public health. We suggest that three elements are particularly useful for anchoring public health practitioners' reflections on public health ethics: 1) the notions of "common ...

It is a common practice to include resisted sprint training to improve the athlete's ability to accelerate and enhance maximum sprint speed. It is believed that through resisted sprint training, more muscle fibers will be recruited via a greater neural activation and result in an improved stride length (1-3,11,19,22,30).
