Configure the Firepower Management Center. Before you can manage devices and control access to the network, you must configure the Firepower Management Center with additional internet settings and a license. Configure the Firepower Management Center for the First Time; License the Firepower Management Center

### How to Manage a Device with the Firepower Management Center

The Management logical interface is separate from the other interfaces on the device. It is used to set up and register the device to the Firepower Management Center. SSH for data interfaces shares the internal and external user list with SSH for the Management interface. Other settings are configured separately: for data interfaces, enable SSH ...

### Firepower Management Center Configuration Guide ... - Cisco

Each Firepower Management Center and each managed device maintains separate user accounts. For example, when you add a user to the Firepower Management Center, that user only has access to the FMC; you cannot then use that username to log directly into a managed device. You must separately add a user on the managed device.

### Firepower Management Center Configuration Guide ... - Cisco

Use this procedure to upgrade the Firepower software on Firepower Management Center s in a high availability pair. You upgrade peers one at a time. With synchronization paused, first upgrade the standby, then the active. When the standby FMC starts prechecks, its status switches from standby to active, so that both peers are active.

### Cisco Firepower Management Center Upgrade Guide

@Marvin Rhoads If i shutdown FMC from System --> Configuration --> Process --> Shutdown Management Center and then i reboot the VM from vcenter, how the FMC will power on again? Is there any command that i can run in FMC cli and turn it on or it will turn on by itself ? Thank you

### Solved: FMC shut properly - Cisco Community

A vulnerability in the web UI of the Cisco Firepower Management Center (FMC) could allow an authenticated, remote attacker to execute arbitrary commands on an affected device. The vulnerability is due to insufficient input validation. An attacker could exploit this vulnerability by sending crafted input to the web UI.

### Cisco Firepower Management Center Remote Code Execution ...
