Construction Materials Testing (CMT) is the testing of materials used to build new projects, add to existing projects, or amend existing construction projects. The services involved in a comprehensive CMT process greatly depends on the project, the land, and the scope of services. Various agencies offer certification for specific CMT knowledge, such as DOT, ACI, the EPA, and more.

Why is Construction Materials Testing (CMT) Important?

Handbook of Material testing Every material that is being used right from aggregates to steel structures, plastic pipes, reinforced steel, bricks, concrete etc has to be tested to verify the standard and quality of that material. This particular field of project has zero tolerance what so ever from the quality point of view.
