### Memory

Memory definition is - the power or process of reproducing or recalling what has been learned and retained especially through associative mechanisms. How to use memory in a sentence. Synonym Discussion of memory.

### Memory | Definition of Memory by Merriam-Webster

Memory is the faculty of the brain by which data or information is encoded, stored, and retrieved when needed. It is the retention of information over time for the purpose of influencing future action. If past events could not be remembered, it would be impossible for language, relationships, or personal identity to develop. Memory loss is usually described as forgetfulness or amnesia.

### Memory - Wikipedia

Memory, the encoding, storage, and retrieval in the human mind of past experiences. The basic pattern of remembering involves attention to an event followed by representation of that event in the brain. Repeated attention, or practice, enables activities such as playing a musical instrument or recitation of a poem.
